Site Name	5TH SOUTH AUTO RECYCLING				
Address	4397 WEST 700 SOUTH				
City	SALT LAKE	County	SALT LAKE	ZipCode	84104
Site Description	Contact Not Assigned (801) 536-4100				
The 5th South Auto Recycling (5SAR) site is on approximately 6 acres of land. Al's Auto Shop borders 5SAR on the north, and was included as part of the site for site inspection purposes. Since mid-1991, D & D Auto Recycling has leased the portion of the property that was occupied by 5SAR. Al's Auto Shop and DDAR are active auto salvage yards. Usable parts of wrecked and junked automobiles are removed and sold. The remaining parts are sold as scrap or removed offsite. Used oil from the vehicles is transferred to 5-gallon pails and taken off site to a retail gas station for recycling. DDAR currently stores batteries on pallets placed on the concrete floor of the garage. Auto parts, tires and debris are scattered throughout both salvage yards. There are large oil-stained areas on the site.

Site Name	AIR FORCE PLANT 78				
Address	35 MILES NW OF BRIGHAM CITY				
City	BRIGHAM CITY	County	BOX ELDER	ZipCode	84302
Site Description	Contact Not Assigned (801) 536-4100				
Air Force Plant 78 is located on 1,550 acres in Box Elder County. The site area is characterized by concentrations of production facilities surrounded by open area. Plant 78 is involved in fabricating and assembling components such as solid propellant, nozzles, and motor housings. Wastes that have been generated at the Air Force Plant 78 have included chlorinated and non-chlorinated organic solvents, oxidizers, photographic wastes, lab wastes, and waste propellants.

Site Name	AMOCO SLUDGE PIPELINE				
Address	1050 N 750 W				
City	SALT LAKE CITY	County	SALT LAKE	ZipCode	84103
Site Description	Contact Not Assigned (801) 536-4100				
The three inch sludge pipeline was installed in 1965 to transport refinery waste water sludges to AMOCO's waste disposal area. This pipeline travels west from the northwest corner of the production facility, under the railroad tracks and I-15, to the southeast corner of the Rose Park recreational area. The pipeline then turns north and carries the waste to the sludge disposal area.

Site Name	BADGER SMELTING WORKS				
Address	3050 SOUTH 100 WEST				
City	SOUTH SALT LAKE	County	SALT LAKE	ZipCode	84115
Site Description	Contact Not Assigned (801) 536-4100				
The Badger Smelting Works is located in the central portion of Salt Lake County. The smelter process consisted of an ore calciner, capacity 50 tons per day of high grade ore, and also had one reverberatroy furnace. The exact length of time the smelter was in operation is unknown but apparently the smelter was not in operation very long. The waste at the site consists of slag, which is a by-product of the smelting process. Slag is generally found to have high concentrations of heavy metals.

Site Name BARBEE AND WALKER MILL
Address NORTH END OF WHITE REEF WEST OF LEEDS
City LEEDS **County** WASHINGTON **ZipCode** 84746

Site Description **Contact** Not Assigned (801) 536-4100

The Barbee and Walker Mill is located in the northern portion of the Silver Reef area. There are mine and mill tailings with high concentrations of mercury and heavy metals associated with them. There are currently homes in close proximity to the old mill, and its dump area. The mill was in production for approximately seven years, and received ore from one mine in the Silver Reef area. The S1 ARR on the site was submitted to EPA for review on 3/5/98.

Site Name BARBER COMPANY TAR PRODUCTS
Address 1100 WEST NORTH TEMPLE
City SALT LAKE CITY **County** SALT LAKE **ZipCode** 84116

Site Description **Contact** Not Assigned (801) 536-4100

The Barber Company Tar Products encompasses approximately 1 acre in Salt Lake County. The BCTP was a former coal tar refinery in the early 1900's. From 1915 to 1928, roofing materials and tar products were manufactured on site. The property was also used as a concrete batch mixing plant in the early 1940s. The property is currently owned by Utah Power and Light. The site has been inactive since the mid 1970s. Buildings on site have been removed and the vacant land is used for storage of construction rubble. Land use in the four-mile site area is industrial, commercial, and residential with heavy industries present to the west.

Latitude 404626 **Longitude** 1115519 **Northing** 4513867 **Easting** 422192 **USGS Quad**

Site Name BARNEYS CANYON GOLD MINE TAILINGS
Address 8200 S 9600 W
City COPPERTON **County** SALT LAKE **ZipCode** 84006

Site Description **Contact** Not Assigned (801) 536-4100

Barneys Canyon Gold Mine Tailings site lies in the western rural and agriculture portion of Salt Lake County. The entire Barneys Canyon Facility encompasses several square miles. Barneys Canyon operations include rotary drills, front-end loaders, hydraulic shovel and haulage trucks in the mine as well as crushing, screening, agglomeration, conveying equipment, heap leaching facilities and a gold recovery and refining plant. Mining was initiated in February 1989 and is operating at a production rate of 6,700 tons of ore per day.

404749	1115422	4516406	423568		

Site Name	BENNETT PAINT/KARPOWITZ COAL				
Address	2131 SOUTH 300 WEST				
City	SOUTH SALT LAKE	County	SALT LAKE	ZipCode	84101
Site Description	Contact Not Assigned (801) 536-4100 The Bennet Paint Facility/Karpowicz Coal Company site is located in an industrial area of Salt Lake City. The BPF site is not currently in use. Bennett Enterprises manufactured and sold paint and glue products at the site from 1947 to 1985. In June 1985, the company sold its manufacturing business to Grow Group, Inc., but retained ownership of the building and land. Grow Group, Inc., discontinued their paint manufacturing operations at the site in May 1987, but continued to operate a retail paint sales business at the site until recently. The KCC facility is located to the immediate east of the Bennett Paint Facility and historically has been known to transport coal and wood products via rail and heavy hauling trucks.

Site Name	BIG INDIAN MINE				
Address	FOUR MILES SOUTH OF LA SAL				
City	LA SAL	County	SAN JUAN	ZipCode	84530
Site Description	Contact Not Assigned (801) 536-4100 The site has historically been used as a copper and silver mine since the turn of the century. The site encompasses approximately 20 acres, which include highlands and wetlands. There are currently three process settling ponds, three acid leach ponds, an old mill and numerous tailings piles on the site. One of the tailings piles on the site is reportedly radioactive. The expression the local residents used concerning the wastes on this site waste that the site was "real hot". There are 11 endangered, threatened, and sensitive plant species in the Manti La Sal National Forest area between Moab and Monticello Utah.

Site Name	BLUFFDALE SALVAGE				
Address	709 WEST 14600 SOUTH STREET				
City	BLUFFDALE	County	SALT LAKE	ZipCode	84065
Site Description	Contact Alan V. Jones (801) 536-4287				
The Bluffdale Salvage site covers approximately 54 acres. The unlined East Jordan Canal divides the property into two pieces. The southern portion is approximately 34 acres and has been used for agricultural purposes. The northern 20 acres of the property is where the salvage yard is located. The topography is mostly flat with a slight slope to the north and very little elevation change. The site sits on shoreline deposits of the former Lake Bonneville. The facility is situated in a commercial and industrial area with the Utah State Prison located about 1/2 mile to the northeast. There has been junk hauled onto the property over the years. This junk includes old automobiles, machinery, drums, electrical motors, salvaged tanks, etc.

Site Name CHRISTENSEN INC.

Address 1822 S INDUSTRIAL RD

City SALT LAKE CITY

County SALT LAKE

ZipCode 84104

Site Description

Contact Not Assigned (801) 536-4100

Christensen, Incorporated is an electroplating, diamond and metal recovery plant, primarily chrom plating of new drill bits. From 1950 to 1978, Christensen was called Metal Processing and from 1978 to 1981 it was called Christensen Diamond Products. The electroplating process involves a waste water treatment process and includes neutralization and precipitation of heavy metals. The leftover sludge is dried in three cement lined drying ponds and stored onsite until sold for metal recovery.

Site Name CLARK TANK LINES

Address 1400 NORTH BECK STREET

City SALT LAKE

County SALT LAKE

ZipCode 84111

Site Description

Contact Not Assigned (801) 536-4100

The Clark property consists of 3 designated parcels. The majority of the subject property is in an area zoned for light industrial use. A small portion of the site with frontage on Beck Street is zoned commercial. The central portion of the site is essentially vacant. At one time a load-out platform was operated near the east boundary of the yard area. The load-out was used to transfer tanker trailer contents via a gravity feed system. Located adjacent to the load out area was a shallow surface impoundment containing a black tar-like substance. The tar-like impoundment was determined to be non-hazardous and disposed of at the County Landfill. The soil in the vicinity of the load out facility was reported as being highly stained with a hydrocarbon like material. Numerous spill areas where chemicals and a tar like material had been discharged on the ground surface were also covered and the exact location is unknown. Five underground storage tanks that were located in the southern portion of the site, have been excavated. Currently the property is leased to Wolff Excavation Inc., who uses the north end of the site for offices, equipment maintenance and storage. The vacant yard in the center of the site has been used for equipment storage and auctions.

Site Description	Contact Thomas Daniels (801) 536-4100				
The Davenport Smelter site consists of approximately 6 acres in a residential area. This old smelter site processed lead and copper ores from Little Cottonwood Canyon, and as most smelters of this era, it was common to dump the slag onsite or in the immediate area. The smelter was in operation from 1872-1875.

Address	NORTHERN BASE OF DEER NECK MESA				
City	SAN JUAN	County	SAN JUAN	ZipCode	84037
Site Description	Contact		Not Assigned (801) 536-4100		
The site is located at the northern base of Deer Neck Mesa. A minor dry wash originates on site and trends to the northwest in the immediate vicinity of the site. Bedrock sandstone's are exposed in the wash and at numerous locations in and around the site. Where there is no vegetative cover, the bedrock was sometimes covered with a fine grained white to yellow sand (mill tailings). The remedial actions undertaken by Union Oil involved the gathering and covering of mill tailings found onsite. The tailings were covered with a clayey, silty soil of unknown source.

Address	20 MILES NORTH OF MODENA				
City	MODENA	County	IRON	ZipCode	84753
Site Description	Contact Not Assigned (801) 536-4100				
The East Summit Mining Claim is located approximately 20 miles north of Modena. Land use in the surrounding area is mainly mining and ranching. The location is extremely remote. The site is approximately 5 to 10 acres in size. The site consists of a plastic-lined cyanide leach pad covering, piles of trees, and a water tank. In 1985, it was discovered that Stout Construction Company was using the cyanide process to extract gold from the ore, and cyanide was possibly leaking into the environment. The site is now controlled by Hecla Mining Company. EPA designated site as No Further Remedial Action Planned on 7/9/92.

City	CLIVE	County	TOOELE	ZipCode	84101
Site Description	Contact Not Assigned (801) 536-4100				
The Envirocare facility is located along the eastern edge of the Great Salt Lake Desert. The terrain is relatively flat, with a gradual slope of less than 1 percent to the west. There are no residences within the 4-mile radius of influence of the facility. In 1988, Envirocare began construction of a landfill for the disposal of low level radioactive waste. Construction began in 1991 for the mixed waste disposal area. As of the facility reconnaissance, which was conducted on May 21, 1992, the Envirocare facility had accepted approximately 220,000 cubic yards of NORM (Naturally Occurring Radioactive Material) and 33,155 cubic yards of mixed wastes. Envirocare plans to continue accepting mixed wastes in the future under the new regulations.

Address	1/4 MILE SE OF FORT DUCHESNE				
City	FORT DUCHESNE	County	UINTAH	ZipCode	84026
Site Description	Contact Not Assigned (801) 536-4100				
<p>The site is located approximately 30 yards from the shoreline of the Uinta River. There is an approximate residential population of 195 within one mile of the site and 933 residents within four miles of the site. According to the "Potential Hazardous Waste Sites on Indian Lands" report (E & E 1989), an abandoned pole treating operation was located near the town of Fort Duchesne. The site consisted of a 100 gallon dipping vat and a drying area. Creosote was used in the treatment of the wood products. In addition, any surface runoff from the site would flow directly into the Uintah River. The site has been inactive for approximately 15 years with only the dipping vat and a 100 gallon tank remaining. No evidence of stained soil or spills were observed during the October 1988 site visit.</p>

Address	CEDARVIEW ROAD, 1.5 MI N OF BLUEBELL			
City	ROOSEVELT	County	DUCHESNE	ZipCode 84066
Site Description	Contact		Not Assigned (801) 536-4100	
The site is located approximately one and a half miles north of Bluebell. Residential population within one mile of the site is approximately 44 and about 1,386 individuals live within four miles of the site. Gary Refining Company has operated the site since at least the early 1980s. This facility used chemical treated wood chips known as sponge iron to remove hydrogen sulfide from natural gas. When the chips were spent they were removed. If allowed to dry the chips would react with oxygen, begin smoldering and release hydrogen sulfide gas. Gary Refining Company has taken action to prevent the release of hydrogen sulfide gas by keeping the spent wood chips moist and covering them with a light soil. The facility consists of one 30' x 20' surface impoundment, three 5,000 gallon tanks, five gas stippling units, and three buildings.

Site Name	JENNINGS AND PASCOE SMELTER				
Address	STATE ROAD 89 (BECK STREET) AND 800 NORTH				
City	SALT LAKE CITY	County	SALT LAKE	ZipCode	84116
Site Description	Contact Not Assigned (801) 536-4100 This site lies in the Jordan River Valley in an industrial area of Salt Lake City. Businesses in this area specialize in manufacturing, construction and oil refining. The smelter was short lived operating from 1871 to 1872. The smelter process consisted of one reverberatory furnace which was not well adapted for the average ores of Utah. The furnace was useful in preparation of galena ore for a blast furnace. A cupola or blast furnace was added to the works, increasing their value greatly. This smelting operation provided lead ore and was located immediately north of Salt Lake City at the Warm Springs. The waste at the site consists of slag, which is a by-product of the smelting process. Slag is generally found to have high concentrations of heavy metals. The site comprises approximately eight acres.

Site Name	JONES AND PARDEE SMELTER				
Address	6 MI ABOVE THE MOUTH OF LITTLE COTTONWOOD CANYON				
City	SALT LAKE CITY	County	SALT LAKE CITY	ZipCode	84093
Site Description	Contact Not Assigned (801) 536-4100 The Jones and Pardee smelter property is believed to have been approximately 20 acres and located outside of the town of Tannerville, approximately 4 miles below the mining town of Alta. The smelter was a historic custom smelter where lead carbonate ores from mines in Alta were smelted in 1871-1873. The smelter consisted of one cupola and blast furnace with an 8-ton daily charge capacity. The smelter was sold to Wellington Mining and Smelting Works to work ores from Wellington mine and custom ores from other mines in the Alta vicinity. Production in 1872 was 110 tons of bullion with 225 ounces silver, gold, and lead to the ton.

Site Description	Contact		Not Assigned (801) 536-4100		
<p>The Keystone Pit site is bordered on the east and west by two county roads. The site is comprised of two waste disposal pits that were excavated within the northeastern corner of the second of three mine tailings ponds belonging to the former Keystone Wallace Copper Mine. The two waste disposal pits were used from approximately 1984 to 1991 to dispose of drilling muds and waste crude oil associated with the development of oil and gas wells and have a combined area of approximately 800 square feet. The KP mine tailings pond was the recipient of the waste disposal pit's overflow. The two waste disposal pits and the KP mine tailings pond cover approximately two acres. Land uses near the KP site are open range for cattle and mining for various minerals, oil, and gas. A 55 gallon drum was observed to be partially buried in the embankment wall on the west side of the KP mine tailings pond. Approximately 50 residents living in the southern limits of La Sal, reside in within the three to four mile radius of the KP site.</p>

The Livingston Property Site is an old farm that has been gradually encroached upon by urban development. The majority of the site is leased for agricultural purposes (approximately 15 to 20 acres). However, the central portion has the remains of several farm buildings and construction debris. Three cargo trailers with drums and other containers of hazardous materials occupied a portion of the site near the farm buildings. The drums and trailers have since been removed from the site by EPA ERB.

North Star Smelter Site is situated in a steep sloped area of Little Cottonwood Canyon, across from the Alta Ski Resort. This smelter was one of the earlier smelters operated in the Salt Lake area dating back as far as 1866. The mine consisted of one Scotch hearth, one stack furnace, one cupola furnace, a waterwheel, fan and dwelling house. The smelter was in operation for approximately one year and may have been located about one mile west of the Emma mine. The waste at the site consists of slag which is a by-product of the smelting process. Slag is generally found to have high concentrations of heavy metals. The property on which the smelter was located consists of approximately 13 acres.

Chemical analysis of the API Seperator sludge in 1983 showed the following metals to be present in detectable concentrations: arsenic, barium, cadium, chromium, lead, mercury, nickel, and selenium. Also thought to be present are those hazardous organic compunds that are commonly found in crude oil refinery wastes. Potential for release it there were any cracks in the concrete basin of the API Separator. Contaminants may have leaked directly into the soil and could have potentially migrated to the ground water in the upper alluvial aquifer. Air releases from the API Seperator during skimming were highly probable. Air releases from the #2 lagoon due to aeration also were highly probably. Two of the three lagoons onsite are unlined and posed the potential for contaminant migration to the ground water. The site began operation in 1970 and are still operating today.

Address	HIGHWAY 138 3 MILES SOUTH OF I-80			
City	FLUX	County	TOOELE	ZipCode 84029
Site Description	Contact Not Assigned (801) 536-4100			
The site is a series of 5 limestone quarry pits, one of which was used to dispose of high pH cement kiln dust from the Portland Cement Company. One ground water well at the site indicates that constituents from the waste cement kiln dust have leached into the ground water in the area. The liner and slurry walls that were required for the disposal permit for the site were never completed. There is concern that some of the high pH affected water from the site, and other constituents leached from the waste cement kiln dust could adversely affect the ecosystem of the slough, located east and downgradient of the site.

Address	1900 S INDUSTRIAL PARKWAY				
City	PROVO	County	UTAH	ZipCode	84601
Site Description	Contact Not Assigned (801) 536-4100 This site is located at 2555 South Industrial Parkway between Provo and Springville, UT. The plant covers 1.16 acres in the northeast portion of the RI property. The plant consists of various buildings, trucks, and railroad car facilities and numerous storage tanks. The on-site laboratory uses xylene, toluene, and acetone to perform solubility tests on coal tar products. This generates small quantities of waste solvent/product mixtures. These wastes were accumulated in a 5-gallon container and then sent to the pump house for recycling into the tar tanks. Since 1990 or early 1991 spent xylene has been collected and transferred to a 55-gallon drum outside the southeast corner of the shop.

Address	10 MI S OF LA SAL				
City	LA SAL	County	SAN JUAN	ZipCode	84530
Site Description	Contact Not Assigned (801) 536-4100 The solid waste millings are slurred and contained in two tailings ponds. An analysis showed the slurry contained sodium carbonate, bicarbonate, sulfate, radium 226, thorium 230, and uranium (BWPC file). Numerous barrels of unknown content were piled on possible tailings piles. Mine shaft water treated with barium chloride is discharged into the East Coyote Wash. The discharge has a high salinity content.

This site is located in the Southern Pacific Railroad Industrial Park at the intersection of 9300 West and 900 South in Ogden, UT. The facility is a wholly owned subsidiary of Anderson Industries Inc of 13601 Preston Road, 307 West, Dallas, Texas, 75240. No information is now available about any of the processes except the sulfuric acid etching. Approximately 250,000 gallons of a previously listed hazardous waste known as spent pickling liquor (KO62) was generated from the sulfuric acid etching process. This spent pickling liquor was discharged on site into a 135- by 175 foot Hypalon lined surface impoundment for storage and evaporation, This impoundment is located 100 feet north of the plant building.

The Salt Lake City/County Landfill parcels 3 & 4 site consists of approximately 500-600 acres. Household hazardous waste has been disposed of at SL34 and small quantity generator hazardous waste may also have been accepted. The landfill has received asbestos in the past. Wastes are disposed at SL34 using an area fill method, with unlined cells. SL34 has a leachate collection system consisting of gravel layers, sumps, drainage pipe and interceptor trenches. A monitor well system is in place at SL34. The land surrounding SL34 has been primarily used for landfills and livestock grazing in the past.

The Salt Lake City/County Landfill Parcels 1 & 2 (SL12) are located at 1300 South 7800 West in Salt Lake City, UT, and cover roughly 158 acres of land. The SL12 site was started by Salt Lake County in 1975. Parcel 1 was not allowed to accept and industrial or septic waste, records indicate that significant quantities of hazardous waste entered Parcel 2. Records show that acids, bases, organics, inorganics, solvents, and heavy metals were disposed of at the site. Additionally, sanitary sewage sludge and small quantities of various industrial wastes were disposed of at the site. Wastes brought to Parcel 1 were disposed of in unlined cells approximately 3 to 4 feet deep that were typically in contact with ground water.

Site Description	Contact		Not Assigned (801) 536-4100		
The Santaquin Drum site is approximately 10.7 acres, with is comprised primarily of open sagebrush areas. The site contains remnants from a old salvage operation. The salvage operation consisted of machinery repair and circuit board stripping. Vehicles, boats, trailers, and empty drums are still on the site. The property slopes gently to the northeast. There are three pits on the site; one of which was used for a burn pit. Barrels, transformers, and other miscellaneous refuse was in the burn pit at the time of an abatement action.

Signetics Corporation, manufacturers of intergrated circuits on silicon wafers, is located at 1275 South 800 East, Orem, UT. The site is llocated approximately one-half milr north of the Orem City Well. Signetics, a subsidiary of U.S. Phillips Corporation, has been in operation since 1980. Included in this facility are a Waste Solvent Storage Tank, a Wastewater Neutralization System and a Chemical Storage area. Signetics has installed a 10,00 gallon tank that stores flammable waste solvents. Flammable solvents in the facility are drained to a holding tank located in the plant. Twice daily the solvents are pumped to the 10,00 gallon holding tank that is located outside the main building area, south of the parking lot. A transporter will pump the tank once per month and ship the liquid to United States Pollution Control Incorporated (USPCI) for disposal.

The site was a landfill for the Salt Lake area from 1895 to 1930. The area is comprised of 175 acres, and is situated on Utah Power and Light property as well as Salt Lake City and trucking company property. The landfill received both industrial and municipal waste. Ground water in the area is only a few feet deep, and the site borders the Jordan River to the east of the site. RCRA activities at the site indicate that there are PCB's in the ground water associated with the landfill.

Site Name	TROJAN CORP				
Address	8305 S HIGHWAY 6, MOUTH OF SPANISH FORK CYN				
City	SPANISH FRK	County	UTAH	ZipCode	84660
Site Description	Contact Not Assigned (801) 536-4100				
This site is located at the mouth of Spanish Fork Canyon on U.S. highway 6. The plant is located on the east side of the highway. The site is suspected of having nitric acid waste crystal on the soil at various places. The site also had two unlined acid ponds that received assorted wastes (1941 to 1980). The waste was removed and disposed. One pond was then lined with neoprene. The waste put in this pond is sold and recycled. The other pond was buried with 6 feet of cover. There is potential for fire and/or explosions if the nitric acid crystals were to react. Elevated nitrate levels (suspected from Trojan Corp) were found in a Spanish Fork culinary well. The elevated nitrate levels have the potential to cause methemoglobinemia (blue baby syndrome) in infants. There may still be some waste residue in the soil.

Site Name	UTAH POWER & LIGHT CARBON PLT				
Address	INTERSECTION US 6 AND HIGHWAY 33				
City	HELPER	County	CARBON	ZipCode	84526
Site Description	Contact Not Assigned (801) 536-4100 Utah Power and Light, Carbon Plant, is located approximately 2 and 1/2 miles north of Helper. The plant produces electricity from coal. The facility has undergone numerous structural changes and renovations since 1954. Officials at Utah Power and Light suspect that debris from these renovations possibly contained asbestos prior to 1980. The debris was disposed in an onsite landfill during the plant renovations. It is believed that any asbestos disposed in the landfill would have been covered with fly ash and emission waste over the years. The site currently covers approximately 60 acres. On site there are two settling ponds, a chemical storage building, and numerous buildings associated with the production of electricity from coal. The site is currently active.

Site Description	Contact Not Assigned (801) 536-4100				
The site is currently regulated under RCRA, and has a Hazardous Waste Storage permit. Hazardous substances are only temporarily stored at the site and are disposed of at an approved hazardous waste management facility. The site has a history of compliance, no notices of violation have been issued. There is therefore no apparent potential hazard to environment and/or population.

Site Description	Contact Not Assigned (801) 536-4100			
The Wendover Landfill site is an open municipal landfill occupying approximately 40 acres. The landfill is partially covered but nor revegetated. Erosion of cover materials has exposed underlying fill material, including some aluminum dross. Landfill trash was observed to be burning at the time of the initial site visit. The Wendover Landfill was used as a sanitary landfill from 1976 to present.

Site Name	WESTERN ZIRCONIUM INC				
Address	10000 W 900 S				
City	OGDEN	County	WEBER	ZipCode	84404
Site Description	Contact Not Assigned (801) 536-4100				
Western Zirconium uses a three stage manufacturing process. This process utilizes chlorination, liquid-liquid extraction and reduction of zirconium tetrachloride by metal magnesium. Chemicals thought to be found onsite include ammonia chloride, sodium chloride, sodium sulfite and silcia tetrachloride. Western Zirconium has had problems with ground water seeping into the surface impoundments causing overflow problems in the past. In 1980 it was reported that Western Zirconium was discharging mercaptans ino the ambient air.

Site Name	WIGHTMAN AND COMPANY SMELTER			
Address	11 MI UP BIG COTTONWOOD CANYON/SILVER FORK			
City	SALT LAKE CITY	County	SALT LAKE	ZipCode 84060
Site Description	Contact		Not Assigned (801) 536-4100	
The Wightman & Company Smelter Site is located in Big Cottonwood Canyon on the Silver Canyon tributary. The Wightman & Company Smelter processed silver ore from several mines located in Little Cottonwood Canyon. It operated a cupola blast furnace which had the capacity to process 12 tons of ore every 24 hours. The smelter operated for three years from 1871 to 1873. All of the waste at the site consists of slag which is a by-product of the smelting process. Slag is generally found to have high concentrations of heavy metals. The property on which the smelter was located consists of an approximately 2,000 square for area.
